Innovation and sustainability in PVC pipes

Appointment in Prague on Oct. 17 for the Third Conference Organized by the PVC4Pipes Platform.

September 23, 2024 15:14

The third edition of the conference organized by PVC4Pipes, to be held on Oct. 17 in Prague, Czech Republic, will focus on the development of the PVC pipes and fittings market through innovation.

Open to all actors of the PVC pipes value chain, the conference will present and discuss trends, opportunities and challenges for the sector: from market updates to European standardisation developments and efforts made to address sustainability challenges with PVC pipe networks. The conference will also feature topics such as EU regulations impacting the PVC pipes value chain, the readiness of PVC pipes for the hydrogen economy and sustainable innovations along the PVC pipes value chain.

“Our comprehensive program will highlight major developments and opportunities impacting PVC pipes, processing technologies and networks, as well as the regulatory challenges facing the sector,” said Vincent Stone, project leader at PVC4Pipes. “We look forward to sharing the success and collaboration among our partners from all parts of the value chain while offering a valuable opportunity for networking.”

The day before, also in Prague, the annual PVC4Cables conference will take place, a platform dedicated to the PVC electrical cables supply chain.

Participation is free, but online registration is required.
